## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, drawn to method for tightening a screw joint by means of an impulse wrench and a power wrench system.

Group II, claim(s) 5, drawn to a power tool system for screw joint tightening.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I does not require the special technical feature of Group II of a control unit with a section for ascertaining during tightening and based on the detected angular movement of a inertia drive member the value (s) of tightening parameter (s) at each torque impulse and comparing said parameter (s) with a set parameter (s) value (s), and Group II does not require the special technical feature of Group I of calculating torque magnitude and torque growth during a number of delivered impulses.
